1 IIR1 -- Realtime C++ filter library

An infinite impulse response (IIR) filter library for Linux, Mac OSX and Windows which implements Bessel, Butterworth, RBJ, Chebychev filters and can easily import coefficients generated by Python (scipy).

The filter processes the data sample by sample for realtime processing.

It uses templates to allocate the required memory so that it can run without any malloc / new commands for example on embedded systems.

How to use the filter

First the filter is instantiated, then the parameters are set with the function `setup` and then it's ready to be used for sample by sample realtime filtering.

Setting the filter parameters

All filters are available as lowpass, highpass, bandpass and bandstop/notch filters. Butterworth / Chebyshev offer also low/high/band-shelves with specified passband gain and 0dB gain in the stopband.

See the header files in `\iir` or the documentation for the arguments of the `setup` commands.

The examples below are for lowpass filters:

1. Butterworth – [Butterworth.h](#) Standard filter suitable for most applications. Monotonic response.

```
const int order = 4; // 4th order (=2 biquads)
Iir::Butterworth::LowPass<order> f;
const float samplingrate = 1000; // Hz
const float cutoff_frequency = 5; // Hz
f.setup (samplingrate, cutoff_frequency);
```

2. Chebyshev Type I – [ChebyshevI.h](#) With permissible passband ripple in dB.

```
Iir::ChebyshevI::LowPass<order> f;
const float passband_ripple_in_db = 5;
f.setup (samplingrate,
         cutoff_frequency,
         passband_ripple_in_dB);
```

3. Chebyshev Type II – [ChebyshevII.h](#) With worst permissible stopband rejection in dB.

```
Iir::ChebyshevII::LowPass<order> f;
double stopband_ripple_in_dB = 20;
f.setup (samplingrate,
         cutoff_frequency,
         stopband_ripple_in_dB);
```

4. RBJ – [RBJ.h](#) 2nd order filters with cutoff and Q factor.

```
Iir::RBJ::LowPass f;
const float cutoff_frequency = 100;
const float Q_factor = 5;
f.setup (samplingrate, cutoff_frequency, Q_factor);
```

5. Designing filters with Python's scipy – [Custom.h](#) Easy import of coefficients generated by Python's scipy.

```
# Python
sos = signal.ellip(order, pr, sr, f0/fs*2, 'low', output='sos')
print(sos)

// C++
Iir::Custom::SOSCascade<2> cust;
// generated with: "elliptic_design.py"
const double coeff[][6] = {
                {1.665623674062209972e-02,
                 -3.924801366970616552e-03,
                 1.665623674062210319e-02,
                 1.000000000000000000e+00,
                 -1.715403014004022175e+00,
                 8.100474793174089472e-01},
                {1.000000000000000000e+00,
                 -1.369778997100624895e+00,
                 1.000000000000000222e+00,
                 1.000000000000000000e+00,
                 -1.605878925999785656e+00,
                 9.538657786383895054e-01}
            };
    cust.setup(coeff);
```

Realtime filtering sample by sample

Samples are processed one by one. In the example below a sample x is processed with the `filter` command and then saved in y. The type of x can either be float or double:

```
float y = f.filter(x);
```

This is then repeated for every incoming sample in a loop or event handler.

Packages for Ubuntu (xenial / bionic):

If you have Ubuntu xenial or bionic then install it as a pre-compiled package:

```
sudo add-apt-repository ppa:berndporr/usbdux
```

It's available for 32,64 bit PC and 32,64 bit ARM (Raspberry PI etc)

Compilation from source

The build tool is `cmake` which generates the make- or project files for the different platforms. `cmake` is available for Linux, Windows and Mac. It also compiles directly on a Raspberry PI.

Linux / Mac

Run

```
cmake .
```

which generates the Makefile. Then run:

```
make
sudo make install
```

which installs it under `/usr/local/lib` and `/usr/local/include`.

Both gcc and clang have been tested.

Windows

```
cmake -G "Visual Studio 15 2017 Win64" .
```

See `cmake` for the different build-options. Above is for a 64 bit build. Then start Visual C++ and open the solution. This will create the DLL and the LIB files. Under Windows it's highly recommended to use the static library and link it into the application program.

Unit tests

Run unit tests by typing `make test` or just `ctest`. These test if after a delta pulse all filters relax to zero and that their outputs never become NaN.

Documentation

Overview

For an overview of the class structure and general concepts have a look at Documentation.txt.

Learn from the demos

The easiest way to learn is from the examples which are in the `demo` directory. A delta pulse as a test signal is sent into the different filters and saved in a file. With the Python script `plot_impulse_fresponse.py` you can then plot the frequency responses.

Also the directory containing the unit tests provides examples for every filter type.

Detailed documentation

A PDF of all classes, methods and in particular `setup` functions is in the `doc/pdf` directory.

Run `doxygen` to generate the HTML documentation.

Example filter responses

These are the filter responses generated by `iirdemo.cpp` in the `/demo/` directory and then plotted with `plot←_impulse_fresponse.py`.

Credits

This library has been adapted form Vinnie Falco's original work which can be found here:

https://github.com/vinniefalco/DSPFilters

While his original library processes audio arrays this library has been adapted to do realtime processing sample by sample. Also, in contrast to the original library the `setup` command won't require the filter order and instead remembers it from the template argument.

Enjoy!

Bernd Porr – http://www.berndporr.me.uk

Describes a filter as a collection of poles and zeros along with normalization information to achieve a specified gain at a specified frequency. The poles and zeros may lie either in the s or the z plane.

5.1.2 Enumeration Type Documentation

5.1.2.1 Kind

```
enum Iir::Kind
```

Identifies the general class of filter

5.1.3 Function Documentation

5.1.3.1 add() [1/2]

```
template<class Td , class Ts >
void Iir::add (
            int samples,
            Td * dest,
            Ts const * src,
            int destSkip = 0,
            int srcSkip = 0 )
```

Utilities

These routines are handy for manipulating buffers of samples. Add src samples to dest, without clip or overflow checking.

5.1.3.2 add() [2/2]

```
template<typename Td , typename Ts >
void Iir::add (
            int channels,
            int samples,
            Td *const * dest,
            Ts const *const * src )
```

Multichannel add

5.1.3.3 copy()

```
template<typename Td , typename Ts >
void Iir::copy (
            int samples,
            Td * dest,
            Ts const * src,
            int destSkip = 0,
            int srcSkip = 0 )
```

Copy samples from src to dest, which may not overlap. Performs an implicit type conversion if Ts and Td are different (for example, float to double).

- struct LowPass
- struct LowShelf
- struct RBJbase

5.6.1 Detailed Description

Filter realizations based on Robert Bristol-Johnson formulae:
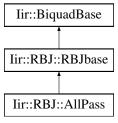

`http://www.musicdsp.org/files/Audio-EQ-Cookbook.txt`

These are all 2nd order filters which are tuned with the Q (or Quality factor). The Q factor causes a resonance at the cutoff frequency. The higher the Q factor the higher the resonance. If $0.5 < Q < 1/sqrt(2)$ then there is no resonance peak. Above 1/sqrt(2) the peak becomes more and more pronounced. For bandpass and stopband the Q factor is replaced by the width of the filter. The higher Q the more narrow the bandwidth of the notch or bandpass.

6 Class Documentation

6.1 Iir::RBJ::AllPass Struct Reference

Inheritance diagram for Iir::RBJ::AllPass:
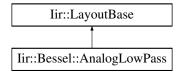

Additional Inherited Members

The documentation for this struct was generated from the following files:

Bandpass with constant skirt gain

6.15.2 Member Function Documentation

6.15.2.1 setup()

```
void Iir::RBJ::BandPass1::setup (
            double sampleRate,
            double centerFrequency,
            double bandWidth )
```

Calculates the coefficients

Parameters

sampleRate	Sampling rate
centerFrequency	Center frequency of the bandpass
bandWidth	Bandwidth of the bandpass

The documentation for this struct was generated from the following files:
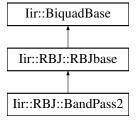

- iir/RBJ.h
- iir/RBJ.cpp

6.16 Iir::RBJ::BandPass2 Struct Reference

```
#include <RBJ.h>
```

Inheritance diagram for Iir::RBJ::BandPass2:

Public Member Functions

- void [setup](double sampleRate, double centerFrequency, double bandWidth)

6.16.1   Detailed Description

Bandpass with constant 0 dB peak gain

6.16.2   Member Function Documentation

6.16.2.1   setup()
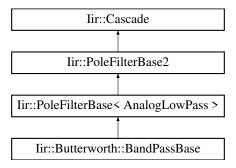

```
void Iir::RBJ::BandPass2::setup (
            double sampleRate,
            double centerFrequency,
            double bandWidth )
```

Calculates the coefficients

Parameters

sampleRate	Sampling rate
centerFrequency	Center frequency of the bandpass
bandWidth	Bandwidth of the bandpass

The documentation for this struct was generated from the following files:

- iir/RBJ.h
- iir/RBJ.cpp

6.21   Iir::BandPassTransform Class Reference

```
#include <PoleFilter.h>
```

6.21.1   Detailed Description

low pass to band pass transform
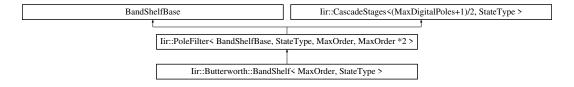

The documentation for this class was generated from the following files:

- iir/PoleFilter.h
- iir/PoleFilter.cpp

6.22   Iir::Butterworth::BandShelf< MaxOrder, StateType > Struct Template Reference

```
#include <Butterworth.h>
```

Inheritance diagram for Iir::Butterworth::BandShelf< MaxOrder, StateType >:

Public Member Functions

- void setup (double sampleRate, double centerFrequency, double widthFrequency, double gainDb)

6.22.1 Detailed Description

template$<$**int MaxOrder, class StateType = DEFAULT_STATE**$>$
struct Iir::Butterworth::BandShelf$<$ **MaxOrder, StateType** $>$

[Butterworth](#) Bandshelf filter: it is a bandpass filter which amplifies at a specified gain in dB the frequencies in the passband.

6.22.2 Member Function Documentation

6.22.2.1 setup()

```
template<int MaxOrder, class StateType = DEFAULT_STATE>
void Iir::Butterworth::BandShelf< MaxOrder, StateType >::setup (
            double sampleRate,
            double centerFrequency,
            double widthFrequency,
            double gainDb )  [inline]
```

Calculates the coefficients

Parameters

sampleRate	Sampling rate
centerFrequency	Centre frequency of the passband
widthFrequency	Width of the passband
gainDb	The gain in the passband
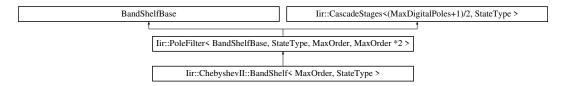

The documentation for this struct was generated from the following file:

- iir/Butterworth.h

6.23 Iir::ChebyshevII::BandShelf$<$ MaxOrder, StateType $>$ Struct Template Reference

```
#include <ChebyshevII.h>
```

Inheritance diagram for Iir::ChebyshevII::BandShelf$<$ MaxOrder, StateType $>$:

Public Member Functions

- void [setup](#) (double sampleRate, double centerFrequency, double widthFrequency, double gainDb, double stopBandDb)

6.23.1 Detailed Description

template<**int MaxOrder, class StateType = DEFAULT_STATE**>
struct Iir::ChebyshevII::BandShelf< **MaxOrder, StateType** >

[ChebyshevII](#) bandshelf filter. Bandpass with specified gain and 0 dB gain in the stopband.

6.23.2 Member Function Documentation

6.23.2.1 setup()
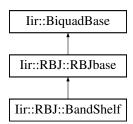

```
template<int MaxOrder, class StateType = DEFAULT_STATE>
void Iir::ChebyshevII::BandShelf< MaxOrder, StateType >::setup (
            double sampleRate,
            double centerFrequency,
            double widthFrequency,
            double gainDb,
            double stopBandDb )  [inline]
```

Calculates the coefficients of the filter

Parameters

sampleRate	Sampling rate
centerFrequency	Center frequency of the bandpass
widthFrequency	Width of the bandpass
gainDb	Gain in the passband. The stopband has always 0dB.
stopBandDb	Permitted ripples in dB in the stopband

The documentation for this struct was generated from the following file:

- iir/ChebyshevII.h

6.24 Iir::RBJ::BandShelf Struct Reference

```

Public Member Functions

- void setup (double sampleRate, double centerFrequency, double widthFrequency, double gainDb, double rippleDb)

6.25.1 Detailed Description

template<**int MaxOrder, class StateType = DEFAULT_STATE**>
struct Iir::ChebyshevI::BandShelf< **MaxOrder, StateType** >

ChebyshevI bandshelf filter. Specified gain in the passband. Otherwise 0 dB.

6.25.2 Member Function Documentation

6.25.2.1 setup()

```
template<int MaxOrder, class StateType = DEFAULT_STATE>
void Iir::ChebyshevI::BandShelf< MaxOrder, StateType >::setup (
            double sampleRate,
            double centerFrequency,
            double widthFrequency,
            double gainDb,
            double rippleDb ) [inline]
```

Calculates the coefficients of the filter

Parameters
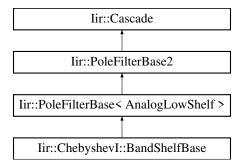

sampleRate	Sampling rate
centerFrequency	Center frequency of the passband
widthFrequency	Width of the passband.
gainDb	Gain in the passband. The stopband has 0 dB.
rippleDb	Permitted ripples in dB in the passband.

Classes

- struct State

Public Member Functions

- complex_t response (double normalizedFrequency) const

6.40.1 Member Function Documentation

6.40.1.1 response()

```
complex_t Iir::BiquadBase::response (
            double normalizedFrequency ) const
```

Gets the frequency response of the Biquad

Parameters

normalizedFrequency	Normalised frequency (0 to 0.5)

The documentation for this class was generated from the following files:

- iir/Biquad.h
- iir/Biquad.cpp

6.41 Iir::BiquadPoleState Struct Reference

```
#include <Biquad.h>
```

Inheritance diagram for Iir::BiquadPoleState:

```
Iir::PoleZeroPair
        ▲
        |
Iir::BiquadPoleState
```

6.41.1 Detailed Description
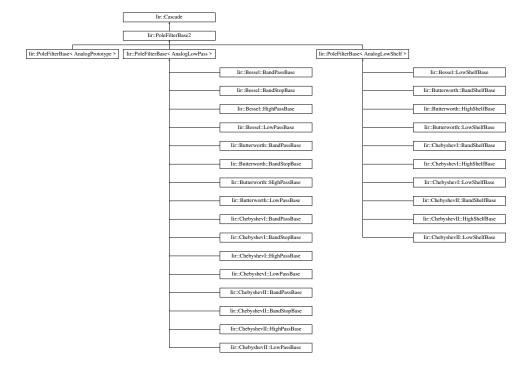

Expresses a biquad as a pair of pole/zeros, with gain values so that the coefficients can be reconstructed precisely.

The documentation for this struct was generated from the following files:

- iir/Biquad.h
- iir/Biquad.cpp

6.42 Iir::Cascade Class Reference

Inheritance diagram for Iir::Cascade:

Classes

- struct Stage
- struct Storage

The documentation for this class was generated from the following files:

- iir/Cascade.h
- iir/Cascade.cpp

6.43 Iir::CascadeStages< MaxStages, StateType > Class Template Reference

```
#include <Cascade.h>
```

Public Member Functions

- void reset ()
- void setup (const double(&sosCoefficients)[MaxStages][6])

6.43.1 Detailed Description

template<**int MaxStages, class StateType**>
class Iir::CascadeStages< **MaxStages, StateType** >

Storage for Cascade: This holds a chain of 2nd order filters with its coefficients.

6.43.2 Member Function Documentation

6.43.2.1 reset()

```
template<int MaxStages, class StateType>
void Iir::CascadeStages< MaxStages, StateType >::reset ( )  [inline]
```

Resets all biquads

6.43.2.2 setup()

```
template<int MaxStages, class StateType>
void Iir::CascadeStages< MaxStages, StateType >::setup (
            const double(&) sosCoefficients[MaxStages][6] )  [inline]
```

Sets the coefficients of the whole chain of biquads.

Parameters

sosCoefficients	2D array in Python style sos ordering: 0-2: FIR, 3-5: IIR coeff.
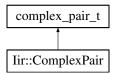

The documentation for this class was generated from the following file:

- iir/Cascade.h

6.44 Iir::ComplexPair Struct Reference

```
#include <Types.h>
```

Inheritance diagram for Iir::ComplexPair:

```
complex_pair_t
      ↑
Iir::ComplexPair
```

6.44.1 Detailed Description

A conjugate or real pair

The documentation for this struct was generated from the following file:

- iir/Types.h

6.45   Iir::DirectFormI Class Reference

```
#include <State.h>
```

6.45.1   Detailed Description

State for applying a second order section to a sample using Direct Form I

Difference equation:

y[n] = (b0/a0)∗x[n] + (b1/a0)∗x[n-1] + (b2/a0)∗x[n-2]

   • (a1/a0)∗y[n-1] - (a2/a0)∗y[n-2]

The documentation for this class was generated from the following file:

   • iir/State.h

6.46   Iir::DirectFormII Class Reference

```
#include <State.h>
```

6.46.1   Detailed Description

State for applying a second order section to a sample using Direct Form II

Difference equation:

v[n] = x[n] - (a1/a0)∗v[n-1] - (a2/a0)∗v[n-2] y(n) = (b0/a0)∗v[n] + (b1/a0)∗v[n-1] + (b2/a0)∗v[n-2]

The documentation for this class was generated from the following file:

   • iir/State.h

6.47   Iir::EnvelopeFollower< Channels, Value > Class Template Reference
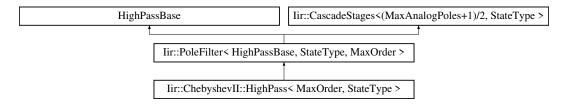

The documentation for this class was generated from the following file:

   • iir/Utilities.h

6.48 Iir::ChebyshevII::HighPass$<$ MaxOrder, StateType $>$ Struct Template Reference

Public Member Functions

- void setup (double sampleRate, double cutoffFrequency, double stopBandDb)

6.48.1 Detailed Description

template$<$**int MaxOrder, class StateType = DEFAULT_STATE**$>$
struct Iir::ChebyshevII::HighPass$<$ **MaxOrder, StateType** $>$

ChebyshevII highpass filter

6.48.2 Member Function Documentation

6.48.2.1 setup()

```
template<int MaxOrder, class StateType = DEFAULT_STATE>
void Iir::ChebyshevII::HighPass< MaxOrder, StateType >::setup (
            double sampleRate,
            double cutoffFrequency,
            double stopBandDb ) [inline]
```

Calculates the coefficients of the filter

Parameters

sampleRate	Sampling rate
cutoffFrequency	Cutoff frequency.
stopBandDb	Permitted ripples in dB in the stopband

The documentation for this struct was generated from the following file:

- iir/ChebyshevII.h

6.49   Iir::ChebyshevI::HighPass< MaxOrder, StateType > Struct Template Reference

```

Public Member Functions

- void setup (double sampleRate, double cutoffFrequency, double q)

6.50.1 Detailed Description

Highpass.

6.50.2 Member Function Documentation

6.50.2.1 setup()

```
void Iir::RBJ::HighPass::setup (
            double sampleRate,
            double cutoffFrequency,
            double q )
```

Calculates the coefficients

Parameters

sampleRate	Sampling rate
cutoffFrequency	Cutoff frequency
q	Q factor determines the resonance peak at the cutoff.

The documentation for this struct was generated from the following files:
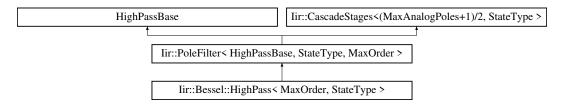

- iir/RBJ.h
- iir/RBJ.cpp

Public Member Functions

- void setup (double sampleRate, double cutoffFrequency, double gainDb)

6.58.1   Detailed Description

template<**int MaxOrder, class StateType = DEFAULT_STATE**>
struct Iir::Butterworth::HighShelf< **MaxOrder, StateType** >

Butterworth high shelf filter. Above the cutoff the filter has a specified gain and below it has 0 dB.

6.58.2   Member Function Documentation

6.58.2.1   setup()

```
template<int MaxOrder, class StateType = DEFAULT_STATE>
void Iir::Butterworth::HighShelf< MaxOrder, StateType >::setup (
            double sampleRate,
            double cutoffFrequency,
            double gainDb )  [inline]
```

Calculates the coefficients

Parameters

|	
sampleRate	Sampling rate
cutoffFrequency	Cutoff
gainDb	Gain in dB of the filter in the passband

The documentation for this struct was generated from the following file:

Public Member Functions
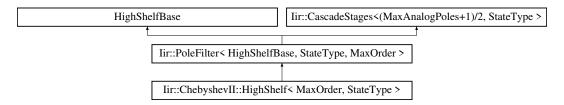

- void setup (double sampleRate, double cutoffFrequency, double gainDb, double stopBandDb)

6.59.1 Detailed Description

template<**int MaxOrder, class StateType = DEFAULT_STATE**>
struct Iir::ChebyshevII::HighShelf< **MaxOrder, StateType** >

ChebyshevII high shelf filter. Specified gain in the passband and 0dB in the stopband.

6.59.2 Member Function Documentation

6.59.2.1 setup()
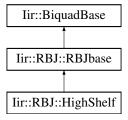

```
template<int MaxOrder, class StateType = DEFAULT_STATE>
void Iir::ChebyshevII::HighShelf< MaxOrder, StateType >::setup (
            double sampleRate,
            double cutoffFrequency,
            double gainDb,
            double stopBandDb )  [inline]
```

Calculates the coefficients of the filter

Parameters

sampleRate	Sampling rate
cutoffFrequency	Cutoff frequency.
gainDb	Gain the passbard. The stopband has 0 dB gain.
stopBandDb	Permitted ripples in dB in the stopband

Public Member Functions

- void setup (double sampleRate, double centerFrequency, double q_factor=10)

6.65.1 Detailed Description

Bandstop with Q factor: the higher the Q factor the more narrow is the notch. However, a narrow notch has a long impulse response (= ringing) and numerical problems might prevent perfect damping. Practical values of the Q factor are about Q = 10 to 20. In terms of the design the Q factor defines the radius of the poles as r = exp(-pi∗(centerFrequency/sampleRate)/q_factor) whereas the angles of the poles/zeros define the bandstop frequency. The higher Q the closer r moves towards the unit circle.

6.65.2 Member Function Documentation

6.65.2.1 setup()

```
void Iir::RBJ::IIRNotch::setup (
            double sampleRate,
            double centerFrequency,
            double q_factor = 10 )
```

Calculates the coefficients

Parameters

sampleRate	Sampling rate
centerFrequency	Center frequency of the notch
q_factor	Q factor of the notch (1 to ∼20)

The documentation for this struct was generated from the following files:

- iir/RBJ.h
- iir/RBJ.cpp

6.77   Iir::LowPassTransform Class Reference

`#include <PoleFilter.h>`

6.77.1   Detailed Description

s-plane to z-plane transforms

For pole filters, an analog prototype is created via placement of poles and zeros in the s-plane. The analog pro-totype is either a halfband low pass or a halfband low shelf. The poles, zeros, and normalization parameters are transformed into the z-plane using variants of the bilinear transformation. low pass to low pass
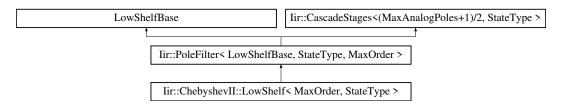

The documentation for this class was generated from the following files:

- iir/PoleFilter.h
- iir/PoleFilter.cpp

6.78   Iir::ChebyshevII::LowShelf< MaxOrder, StateType > Struct Template Reference

`#include <ChebyshevII.h>`

Inheritance diagram for Iir::ChebyshevII::LowShelf< MaxOrder, StateType >:

Public Member Functions

- void setup (double sampleRate, double cutoffFrequency, double gainDb, double stopBandDb)

6.78.1   Detailed Description

template<**int MaxOrder, class StateType = DEFAULT_STATE**>
struct Iir::ChebyshevII::LowShelf< **MaxOrder, StateType** >

ChebyshevII low shelf filter. Specified gain in the passband and 0dB in the stopband.

6.78.2   Member Function Documentation

6.78.2.1   setup()

```
template<int MaxOrder, class StateType = DEFAULT_STATE>
void Iir::ChebyshevII::LowShelf< MaxOrder, StateType >::setup (
            double sampleRate,
            double cutoffFrequency,
            double gainDb,
            double stopBandDb )  [inline]
```

Calculates the coefficients of the filter

Parameters

sampleRate	Sampling rate
cutoffFrequency	Cutoff frequency.
gainDb	Gain the passbard. The stopband has 0 dB gain.
stopBandDb	Permitted ripples in dB in the stopband

The documentation for this struct was generated from the following file:
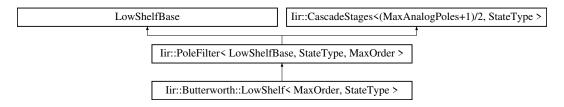

- iir/ChebyshevII.h

Iir::Butterworth::LowShelf< MaxOrder, StateType >

Public Member Functions

- void setup (double sampleRate, double cutoffFrequency, double gainDb)

6.79.1 Detailed Description

template<**int MaxOrder, class StateType = DEFAULT_STATE**>
struct Iir::Butterworth::LowShelf< **MaxOrder, StateType** >

[Butterworth](#) low shelf filter: below the cutoff it has a specified gain and above the cutoff the gain is 0 dB.

6.79.2 Member Function Documentation

6.79.2.1 setup()

```
template<int MaxOrder, class StateType = DEFAULT_STATE>
void Iir::Butterworth::LowShelf< MaxOrder, StateType >::setup (
            double sampleRate,
            double cutoffFrequency,
            double gainDb )  [inline]
```

Calculates the coefficients

Parameters

sampleRate	Sampling rate
cutoffFrequency	Cutoff
gainDb	Gain in dB of the filter in the passband

The documentation for this struct was generated from the following file:
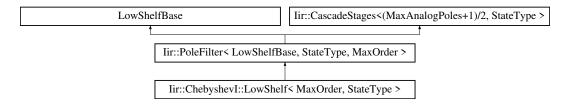

- iir/Butterworth.h

6.80 Iir::ChebyshevI::LowShelf< **MaxOrder, StateType** > **Struct Template Reference**

```

```

Inheritance diagram for Iir::ChebyshevI::LowShelf< MaxOrder, StateType >:

Public Member Functions

- void [setup](#) (double sampleRate, double cutoffFrequency, double gainDb, double rippleDb)

6.80.1 Detailed Description

template<**int MaxOrder, class StateType = DEFAULT_STATE**>
struct Iir::ChebyshevI::LowShelf< **MaxOrder, StateType** >

[ChebyshevI](#) low shelf filter. Specified gain in the passband. Otherwise 0 dB.

6.80.2 Member Function Documentation

6.80.2.1 setup()
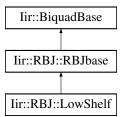

```
template<int MaxOrder, class StateType = DEFAULT_STATE>
void Iir::ChebyshevI::LowShelf< MaxOrder, StateType >::setup (
            double sampleRate,
            double cutoffFrequency,
            double gainDb,
            double rippleDb )  [inline]
```

Calculates the coefficients of the filter

Parameters

sampleRate	Sampling rate
cutoffFrequency	Cutoff frequency.
gainDb	Gain in the passband
rippleDb	Permitted ripples in dB in the passband

Public Member Functions

- void setup (const double(&sosCoefficients)[NSOS][6])

6.95.1 Detailed Description

template<**int NSOS, class StateType = DEFAULT_STATE**>
struct Iir::Custom::SOSCascade< **NSOS, StateType** >

A custom cascade of 2nd order (SOS) filters.

6.95.2 Member Function Documentation

6.95.2.1 setup()

```
template<int NSOS, class StateType = DEFAULT_STATE>
void Iir::Custom::SOSCascade< NSOS, StateType >::setup (
            const double(&) sosCoefficients[NSOS][6] )  [inline]
```

Python scipy.signal-friendly setting of coefficients. Sets the coefficients of the whole chain of biquads. The argument is a 2D array where the 1st dimension holds an array of 2nd order biquad coefficients. The sos coefficients are ordered "Python" style with first the FIR coefficients (B) and then the IIR coefficients (A). The const double array needs to have exactly the size [NSOS][6].

Parameters
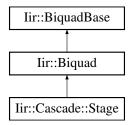

sosCoefficients	2D array Python style sos[NSOS][6]. Indexing: 0-2: FIR, 3-5: IIR coefficients.
